Key messages

The economy is everything - “the economy” is not the product of a set of activities of private businesses; rather everything is “in” including the private sector, public sector and the voluntary, community and faith sectors. The actions of individual citizens are also within what should be considered as the economy. Thus everything is connected;

A healthy population and productive economy are linked - the economy and how we approach it is perhaps **the** determinant of health and wellbeing. There is evidence on the interactions between healthy people and economic growth, and how the two are symbiotic;

Good jobs are good for health - creating good jobs, helping people acquire the right skills through training and creating the opportunities for accessing good work are critical to people keeping healthy so they can all actually work and be productive. This represents good economics.

Many have been left behind - a number of commentators have set out how the way in which the economy has developed has left people behind and exacerbated poverty. Some are left behind in the quest for economic growth. There is a strong research base on this, and this has led to the establishment of terms such as “inclusive growth”; which describes the effort to ensure the economy works for everyone. Thus the central “health” challenge of stalling healthy life expectancy and inequalities aren’t a problem for the NHS, they are a problem for the whole economy;

Change how we measure growth - poor health and health inequalities, which are quantifiable, impact on economic growth. Investment in better health can also impact on economic growth. What we measure and value is important; this is one of the things that underpins calls to widen the measure of economic growth from solely GVA to a wider measure that includes social benefit. It would be easy, in narrative terms at least, to also include resilience and cohesion in the things we value in our economy;

“Sweat our assets” - we need to push hard on the notion of economic anchor institutions, at city and neighbourhood level, to ensure we capitalise on the social benefit of existing and new resource commitments across the city. Of particular importance are the high priority groups that most often are left behind by economic growth. There is an important “people and communities” element to this; progress shouldn’t only rely on technical solutions but should also be based on engagement to involve communities in solutions and build on the assets that already exist.

1. Introduction

Work is a critical determinant of good health and wellbeing. This is not just about paid employment, but could also be described as any meaningful activity that provides us with a sense of purpose.

Similarly a healthy population is a critical determinant of high productivity and a flourishing economy, in the same way that a good transport network underpins economic growth. Health and wealth go hand in hand and it is why I am focussing on work, the economy and health in this year's report.

Almost two thirds of people in Sheffield are aged between 16 to 64 years and constitute the majority of what is known as the working age population. We are seeing more and more people of working age develop long term conditions, including mental ill health and musculoskeletal problems that are affecting their chances of finding and staying in meaningful employment or activity.

As the two graphs in Figure 1 show, the amount of time we can expect to live in poor health is increasing, especially for women, and this period of poor health is starting earlier than ever, before retirement age.

Figure 1: Life expectancy and healthy life expectancy for men and women in Sheffield and England (2009 to 2016)

Whilst the figures in Sheffield reflect the national trend, the position is worse in Sheffield; worse for women; and worse among people who are deprived.

For example, strokes, which we tend to associate with old age, are in fact more common in people under the age of 65. Stroke victims often lose significant function in terms of the activities of day to day living and do not return to work. Their partner or relative may also have to give up work or other activities in order to provide full time care for their loved one. The evidence clearly sets out there are more people of working age with multiple illnesses than in the older population. This cannot be solved by more or better health and social care services alone and serves to underscore the importance of prevention across the life course. A critical element of that prevention effort is work.

For work to be beneficial to health it needs to provide adequate pay, acceptable hours, good health and safety, job security, job progression and opportunities for employees to participate in decision making. But with the rise of the “gig” economy and self-employment, the opportunities for good work are diminishing. We are seeing too many people becoming trapped in low paid, unskilled and unstable work, often interspersed with periods of unemployment. This is double-jeopardy. There are significant health inequalities in the working age population, most notably between those who are

employed and those who are unemployed. There has also been an increase in the number of households who experience in-work poverty and disparities in health outcomes between skilled and unskilled workers, between black and minority ethnic communities and the white population and between men and women.

If average life expectancy and healthy life expectancy are to continue to increase and the gap in life expectancy and healthy life expectancy between the best and worst off is to narrow, we must prioritise the development of an inclusive economy and good work. Equally, if the local economy is to grow and flourish we must prioritise improvements in the health and wellbeing of our population.

Health and good work go hand in hand

In the first chapter of this report I look at the economic case for a healthy workforce as well as setting out the reasons why good quality work is beneficial to health. High levels of chronic ill health, deprivation and low skills means we have a long way to go yet in terms of a healthy and happy workforce. Although the facts are worrying, there are actions we can take but these will need to be systematic and at scale. All employers have a significant contribution to make.

Health and economy go hand in hand

The second chapter of the report looks at the relationship between health and the economy. I suggest that current economic structures simply aren't working for most people (with the exception of the highest 1% earners) and may even be impacting adversely on our health and wellbeing - leading to entrenched patterns of inequality and disadvantage. A difference can be made but the approach should co-ordinate across all sectors of the economy, take a medium to long term view and incorporate a large enough economic footprint.

Anchor institutions bring health and wealth together

In the final chapter of the report, I bring the two perspectives of health and wealth together and explore in more depth what we need to do to ensure we all benefit from an inclusive and sustainable economy. In doing so I highlight the pivotal role anchor institutions will play in making this approach a reality.

Recommendations

I make three recommendations for supporting and encouraging the development of an inclusive and sustainable economy for Sheffield:

- 1. Sheffield City Council, Sheffield City Partnership and Sheffield City Region** should align and embed action into their economic strategies to enable and encourage all local employers to recognise their role in providing good work and ensuring that the most disadvantaged in our society are not left behind in their ambitions. Practical examples of this might include all organisations working towards implementing the Fair Employer Charter, paying the foundation living wage and being ethical procurers;
- 2. Sheffield City Partnership**, as part of developing a strategy for an inclusive and sustainable economy, should consider how best to use the resources currently available to the city, to incentivise implementation of the strategy; and
- 3. Sheffield City Partnership** should facilitate the public, private and voluntary anchor institutions of Sheffield to develop a collective strategy to secure and progress their contribution to an inclusive economy, underpinned by supportive strategies for each sector.

Greg Fell

Director of Public Health for Sheffield

Work & health

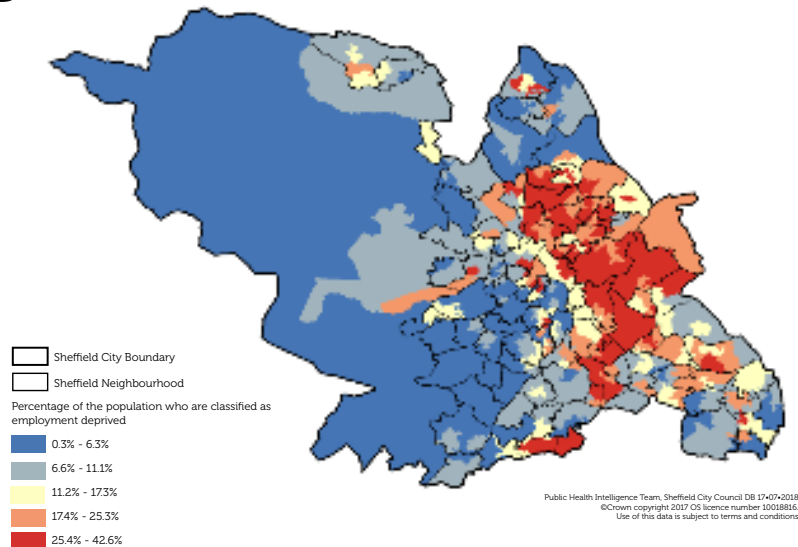

Work and health

Work is important to our health and wellbeing, and not just for material reasons.

Employment is a primary determinant of health, impacting both directly and indirectly on the individual, their family and community. Unemployment is associated with an increased risk of illness and early death. Whether we are in or out of work and for how long, as well as the type of work we do, can have a significant impact on our mental health, leading to increased feelings of lack of

Page 49

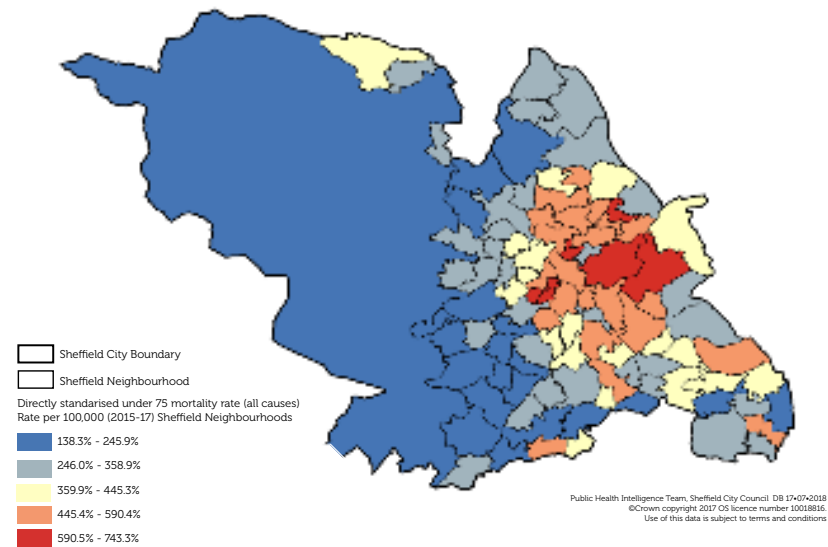

Figure 2: Map of Employment domain from IMD 2015

control, insecurity, anxiety and social isolation. There is an unequal distribution of unemployment and the type of work available across Sheffield. This in itself contributes to inequalities in health.

For example, the maps in figures 2 and 3 below show there is a strong association between poor health outcomes (in this instance we look at early death) and unemployment. For virtually any adverse health outcome we choose to look at, we find a similar association with unemployment.

Figure 3: Map of under 75 all-cause mortality 2013-2017

Source: Index of Multiple Deprivation 2015; ONS - Mortality and population data

The cost of poor health at work

There is also significant inequality in the employment rates between those with a health illness, condition or disability and the rest of the population, as shown in Figure 4¹.

The combined cost of sickness absence, lost productivity through worklessness and health-related productivity losses are estimated to be over £1 billion annually in Sheffield alone. This is around the same amount as it costs to run the local NHS for a year.

The cost of poor mental health and addiction on work and the economy can be particularly high given that onset is often early in a person's working life or even during adolescence. This is disruptive to employment patterns and career aspirations, life chances as well as being a cost to the benefit system.

It is estimated that the cost of poor mental health alone to local employers is as much as £420 million a year with over half of this cost resulting from people who are less productive due to poor mental health in work, with additional costs from sickness absence and staff turnover.

Whilst employers may argue that the taxes, business rates and pension contributions they pay are sufficient and it is for the public sector to provide a healthy, well trained workforce, there seems to be a clear case for a significant return on investment for employers to improve the health of their workforce as well.²

Figure 4: Employment rates between those with an illness, condition or disability and the rest of the population

² Koss 2005 Sick on the Job , Myths and Realities about Mental Health and Work. World Health Organisation:

Mental health matters

The high prevalence of mental illness in the Sheffield population is a particular concern, not least because of the adverse impact on people's lives, employment outcomes and the economy. For example, among the working age population 42% of those who report mental illness as their main health problem³ are in employment compared to 78% for the total population.

Page 51
Similarly, we are seeing an increase in the number and proportion of people who identify mental health as the main health reason for requiring employment support allowance. As the graph in Figure 5 shows, whilst this increasing trend reflects the national picture, it is consistently higher in Sheffield in comparison with the England average and the gap between the city and the rest of the country is widening.

For those **in** work, poor health has a substantial impact on their ability to retain work. 19% of long-term sickness absence in England is attributed to mental ill health. It is a particular concern that some of these trends are going in the wrong direction. For example in 2014, based on national sources, over 150,000 working days were lost in Sheffield due to stress, depression and anxiety, an increase of over 24% since 2009⁴. Each year poor mental health costs the Sheffield economy around £700 million through lost productivity, social benefits and healthcare.

³ Includes: mental illness, phobia, panic, nervous disorders, depression and anxiety

⁴ There are 260 working days per year

Opportunities for young people

There are currently over four times more economically inactive people in Sheffield than there are unemployed. Within the economically inactive population in 2015, some 48% of people in receipt of Employment and Support Allowance (ESA) had a mental or behavioural disorder as their primary condition.

Research shows that these health categorisations 'hide' unemployment, and that Sheffield's unemployment rate, as elsewhere, is greater than national data indicate. Unemployment calculated on the basis of the assumption that people claiming ESA are not able, or indeed do not want to work. Local research has shown that if these people had lived in wealthier areas they would have been able to secure and prosper in work⁵. This suggests that Sheffield has almost twice the unemployment rate suggested by national data.

Future trends in workforce health will also impact on our ability to maximise employment and productivity over the coming years. Currently 30% people of working age in Sheffield have a long-term health condition. This is expected to grow to 40% by 2030 (without intervention) with serious consequences for future economic productivity. Of these people, over half say their health is a barrier to the type or amount of work they can do. The distribution of this barrier to employment (and better health and wellbeing) is not equal; the most deprived people in the city have a 60% higher level of long term conditions than the least deprived⁶.

Young people are a particularly important group to consider in this context. We know that around half of mental health conditions start before the age of 14 years. If we put this together with the data above we can see that addressing and preventing poor mental health in young people is a critical factor in developing a successful workforce and economy. The opportunities for young people with disabilities to participate in employment are especially challenging. Young people with disabilities account for 7% of the 16-24 population in Sheffield but make up 16% of the total number of this age group not in education, employment or training. The employment rate gap between people with and without disabilities widens after education from 27.8% at the age of 23 to 36.2% at the age of 24.

Obviously economic inactivity starting at such a young age has enormous implications for the life chances of those affected **and** for their longer-term ambitions and health and economic outcomes. The annual cost to the state of the average claimant receiving ESA is £8,500. Conversely, whenever an out-of-work claimant moves into a job at the "Living Wage"⁷, the local economy benefits on average by £14,436 annually, or 40 times this over an employment lifetime.

Good jobs are good for our health

We cannot simply consider increased number of job opportunities as the sole route to economic prosperity and improved health. As we have seen, work can be a cause of various health problems: 'bad' jobs make us ill. A local study by Sheffield Citizens Advice for example, clearly shows the adverse impact insecure employment can have on people's health and wellbeing.⁸

Page 53
The changing face of employment in the UK is an important factor in this, particularly in regard to the rise in self-employment and the "gig" economy.⁹ There has been a significant increase in the number of Sheffield people reporting as self-employed. This may be down to increased innovation and entrepreneurship, but it could also be an indication of the rise in the gig economy.

The proliferation of low skilled, low paid, part-time and zero hours contracts is leading to an alarming increase in the number of households living in poverty who are in work. Put simply work, in and of itself, isn't working for enough people and it certainly isn't working for health. Low pay, low security and low status jobs can adversely affect health. The productivity challenge has both a supply and a demand side therefore; skills shortages are a significant factor, but so too is the proliferation of low-skilled jobs.¹⁰ The picture we see emerging in Sheffield is one of an increasing number of people working increasing numbers of jobs and hours.

We are learning more and more about the link between good work and better health. Nationally, the Work and Health Unit is seeking to make "work" a clinical outcome. Similarly, our voluntary and community sector not only provides significant support to the people of Sheffield, it also provides numerous opportunities for people to contribute to the development of their community and to get involved in meaningful activity. We need to generate more, clear pathways for such people to progress into paid employment if they so wish. We are beginning to see this happen in relation to helping people with a health condition or disability to either return to work or remain in work. There are also opportunities for closer working between job centres, local health and social care services and education and skills training to improve employment outcomes.

For every job to be a healthy job it needs to be a good job. This means that every employee must be paid fairly, work in a safe and healthy workplace, be treated decently and with respect, have guaranteed hours, have the chance to be represented by unions and be consulted on what matters at work and have the chance to progress in work and get on in life. Too many jobs in Sheffield, as well as the UK more widely, aren't providing this.

That's why it is essential for the city to find ways of enabling and encouraging all employers to recognise their role in providing **good work**. The TUC's "Great Jobs Agenda" is an excellent example

⁸ <https://citizensadvice/sheffield.org.uk/news/insecure-employment-report/>

⁹ <https://www.parliament.uk/business/committees/committees-a-z/commons-select/work-and-pensions-committee/inquiries/parliament-2015/self-employment-gig-economy-16-17/>

¹⁰ RSA Inclusive Growth Commission 2017 <https://www.thersa.org/action-and-research/rsa-projects/public-services-and-communities-folder/inclusive-growth-commission#>

of this, and needs to be progressed; the recommendations within the Sheffield Citizens' Advice report on insecure employment also deserve support.

Recommendation

Sheffield City Council, Sheffield City Partnership and Sheffield City Region should align and embed action into their economic strategies to enable and encourage all local employers to recognise their role in providing good work and ensuring that the most disadvantaged in our society are not left behind in their ambitions. Practical examples of this might include all organisations working towards implementing the fair employer charter, paying the foundation living wage and being ethical procurers.

Figure 6: A Great Job

A great job is where you ...

- are paid fairly
- work in a safe and healthy workplace
- are treated decently
- have guaranteed hours
- have the opportunity to be represented by unions and a strong independent voice on what matters at work
- have the opportunity to progress at work and get on in life

3. Economy and health

Economy and health

Figure 7: The shape of income inequality over the last 100 years in Britain

Share of all income received by the richest 1% in Britain

Source: Policy Press 2012 and Semantic Scholar

The economy matters to the health and wellbeing of the population, but much depends on the size, shape and type of economy and the growth it experiences. There is growing recognition that traditional models of economic growth have simply failed to address inequalities, and may have exacerbated them, as is suggested by the World Economic Forum.¹¹

As the graph in Figure 7 shows the share of all income received by the richest 1% of people in Britain has quadrupled over the last 30 years, widening the income inequality gap back toward levels that existed before the turn of the 20th century.

In the financial year ending 2017, before direct taxes and cash benefits, those in the top fifth income group had an average income of £88,800 per year, compared with £7,400 for the poorest fifth - a ratio of 12 to 1 (income includes earnings, private pensions and investments).¹² There is no evidence to suggest the local position is any different to this.

For previous generations, the risk of and exposure to mass unemployment was the main economic challenge faced. Employment is now comparatively high but real wages have stagnated and the quality of work transformed, resulting in a greater number of people detached from the benefits that economic growth is supposed to deliver.

The case for an inclusive economy

What became clear after the financial crash of 2007-08 was that the UK economy was overly dependent on London for its economic success and placed insufficient importance on the role of local economies (especially core cities such as Sheffield) in creating a more economically resilient and cohesive country.¹³ The concept of an “inclusive economy” emerged from this understanding.¹⁴

Characteristics of the local population such as health and well-being, social cohesion, isolation and poverty all impact on opportunities to participate in and benefit from the economy and economic growth. Sheffield, wide inequalities in healthy life-expectancy, long-term ill health and deprivation are the defining factors of economic exclusion and represent significant challenges for developing inclusive economic policies.

There are a number of different ways to define and measure the inclusiveness of an economy and the type of growth it experiences, but the common factor in all of these measures is the emphasis placed on the need to balance economic prosperity with the ability of all parts of society to participate in and benefit from it. This means giving **equal** weight to economic, health and social factors. The 2018 State of Sheffield report¹⁵ attempted to do just that. Specifically the report used the Grant Thornton Vibrant Economy Index as a measure of inclusive economy¹⁶. This combines indicators from the following six domains:

- Prosperity
- Dynamism and opportunity
- Inclusion and equality
- Health, wellbeing and happiness
- Resilience and sustainability
- Community, trust and belonging

According to the Grant Thornton Vibrant Economy Index, Sheffield was ranked in the bottom 40% in the country in 2013.

Although this position has improved significantly over the last 5 years (Sheffield is now around average - see the map in Figure 8), the city still scores low in relation to the inclusion and equality domain. This is being driven, in the main, by high deprivation, low aspiration and long term ill health preventing people from accessing the labour market. Without a healthy and well workforce, any growth will be unequal, less sustainable and will not generate health improvement.

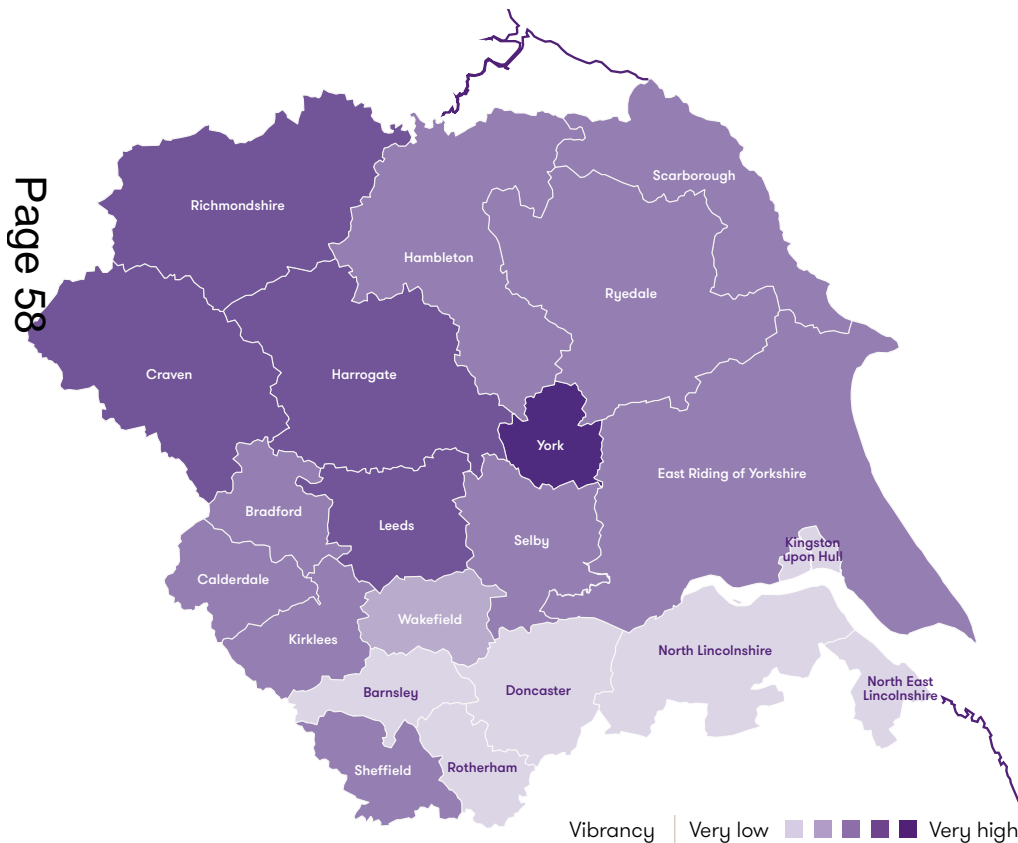

What this tells us is that if Sheffield is to be a place where all of its residents flourish and thrive the key agencies and institutions of Sheffield across the private, public, academic, voluntary, community and faith sectors must work together to shape the economic future of the city.

¹³ Regional Studies Association (2015) Spatially rebalancing the UK economy: the need for a new policy model. http://www.regionalstudies.org/uploads/documents/SRTUKE_v16_PRINT.pdf

¹⁴ The OECD defines inclusive growth as: 'Economic growth that creates opportunity for all segments of the population and distributes the dividends of increased prosperity, both in monetary and non-monetary terms, fairly across society'. <http://www.oecd.org/inclusive-growth/>

Health is an asset to the economy

Figure 8: Map of Vibrant Economy Index in Yorkshire and the Humber in 2017

Source: Grant Thornton

While there is ample focus on what ill health costs us both as individuals and as a society, there is rarely acknowledgement of the converse: that good health is an asset, essential for a flourishing society and economy. Good health and an inclusive economy, that shares the benefits of growth and good work across all groups in the population, go hand in hand. On this basis, a strategy for an inclusive economy could be regarded as one of the most important and effective approaches to improving health and wellbeing in a population.

Recommendation

Despite years of austerity, there is still funding coming into Sheffield to support business investment and economic growth. These resources represent an important contribution to health improvement. For this reason the:

Sheffield City Partnership, as part of developing a strategy for an inclusive and sustainable economy, should consider how best to use the resources currently available to the city to incentivise implementation of the strategy.

4. Bringing health and wealth together

Bringing health and wealth together

There is a growing city-wide commitment to fostering a more inclusive and sustainable economy for Sheffield.

The State of Sheffield 2018¹⁷ report drew together a range of data and insights about life in Sheffield with the aim of building a local evidence-base for how and why we should pursue an inclusive economic approach for the city. The Sheffield City Partnership¹⁸ is now using this evidence to help it develop a framework for an inclusive and sustainable economy for Sheffield. The aim is to build on what makes Sheffield special, nurturing the city's tradition as a collection of friendly, unique and diverse local communities, at the heart of a thriving, open and trailblazing global city. Across these communities, we need to ensure every citizen has the best chance of participating equally in and benefitting from success. Put simply, Sheffield's economy should work for us all, to help us lead happier, healthier and more fulfilling lives.

We shouldn't underestimate the size of the task however, either in terms of the resources that will be required to achieve change; agreeing the shape and nature of the changes we need to make (or how we will measure them); exactly how to achieve change; or the time all of this will take. It is also clear that we will need to make sure this plan aligns with Sheffield City Region's economic strategy as well as those of individual organisations such as Sheffield City Council. It is in this regard in particular that the anchor institutions of Sheffield have a pivotal role to play.

¹⁷ <https://www.sheffieldcitypartnership.org/scp-reports/2018/3/5/state-of-sheffield-2018-report-tyte2>

¹⁸ <https://www.sheffieldcitypartnership.org/>

The UK Commission for Employment and Skills¹⁹ describes an anchor institution as one that, alongside its main function, plays a significant and recognised role in a locality by making a strategic contribution to the local economy. In Sheffield anchor institutions include Sheffield City Council, the two local universities and the Sheffield Clinical Commissioning Group along with local NHS providers. These are organisations that are rooted in their local communities by mission, invested capital, or relationships to customers, employees, and vendors. Anchor institutions share a number of key characteristics:

- **Spatial immobility:** strong ties to the geographic area in which they are based through invested capital, mission and relationship to customers and employees
- **Size:** large employers with significant purchasing power. Both these factors influence the level of impact these institutions can have on the local economy
- **Non-profit:** tend to operate not-for-profit; it is much simpler for private businesses to move, meaning there is no guarantee they will continue serving the local community in the long-term. However, there are examples of for-profit organisations playing the role of an anchor.

¹⁹ <https://ukces.blog.gov.uk/2015/03/19/ukces-explains-what-is-an-anchor-institution/>

The role of anchor institutions

At city level the combined impact of the voluntary, community and faith sector is included on the list of anchor institutions (see Figure 9) because they are increasingly connected to each other and have a significant amount to offer in terms of buying power and as a shaper of local communities. At community level, community and voluntary sector organisations are often **the** anchor organisation, along with CP practices, pharmacies and libraries.

Page 61

Figure 9: Anchor Institutions

Source: Sheffield City Council

The City Partnership Board has started work across all the big public sector anchor institutions in Sheffield on social value. The role of anchor institutions is to move away from sector-specific thinking and focus on developing the “return on investment” case for a whole place.

Sheffield City Council, for example, is leading on ways of using the power of procurement of goods and services to spread the influence of anchor institutions. It has revised protocols, processes and tools across the organisation and its supply chain to enable it to conduct business ethically, effectively and efficiently for the benefit of Sheffield. In particular, it has adopted three tools: social value tests; an ethical code of conduct for suppliers; and revised tender processes. But we can and must go further than this. The table in Figure 10 sets out the four elements of the anchor institution role that we need to align and promote across the public, private and voluntary sectors in Sheffield.

Recommendation

The **Sheffield City Partnership** should facilitate the public, private and voluntary anchor institutions of Sheffield to develop a collective strategy to secure and progress their contribution to an inclusive economy, underpinned by supportive strategies for each sector.

A strategy for anchor institutions

Figure 10: The four key elements of a strategy for anchor institutions

Page 62

Leadership and readiness for an anchor approach

- developing a jointly agreed Anchor Strategy underpinned by supportive strategies for each sector
- linking local and diverse purchasing programmes to broader organisational diversity, sustainability and health goals
- committing a percentage of senior management time and a dedicated budget in each anchor institution to 'Anchor Mission' initiatives
- engaging with the local community to identify community priorities around local and diverse purchasing

Local sourcing and procurement

- making local sourcing an explicit goal in the strategic plan and other policies with staff posts dedicated to inclusive local sourcing
- making a commitment to building capacity in the local supply chain to access larger contracts
- assessing the full economic impact of every purchasing decision
- adjusting payment periods and invoicing processes to accommodate small businesses

Hiring and staffing

- a commitment to an accredited living wage for the City, starting with an agreement among the anchor institutions
- equipping local residents for high-demand, frontline jobs that are connected to further employment prospects
- maximising apprenticeship opportunities for people from disadvantaged and diverse communities

Place-based investing

- develop partnerships with local majority and minority ethnic chambers of commerce, women's business organisations and other supplier diversity organisations
- foster working relationships between community outreach and investment staff
- move cash and other assets into local banks and credit unions, making a distinction between investment in hedge funds and local social capital
- community investment in land trust. Purchase land to secure sustainable and affordable housing, emphasising how anchor institutions manage their estates for the benefit of the community

5. Progress report

Progress report

Health and wellbeing in Sheffield

Public Health England produces a dashboard of key public health indicators for all local authorities in England. The indicators are focussed on the mandated elements of the Public Health Grant.

Each local authority is ranked out of 16 similar local authorities using the latest data available. The rank rates 1 as the highest or best and 16 as the lowest or worst.

Sheffield's ranking is set out in the table in Figure 11. This shows a very mixed picture with Sheffield ranked among the best in terms of child obesity, tobacco control and best start in life; broadly average in relation to sexual and reproductive health and drug and alcohol treatment; and among the worst for NHS Health Checks and air quality (although it should be noted that the air quality measure remains under development).

Figure 11: Public Health Dashboard (Sheffield)

Indicator	Rank	Position
	(out of 16 where 1 is best and 16 is worst)	
Child Obesity (2016-17)	4	Best
NHS Health Check (2013-14 to 2017-18)	13	Worst
Tobacco Control (2016-17)	4	Best
Alcohol Treatment (2016-17)	11	Average
Drug Treatment (2016-17)	9	Average
Best start in life (2016-17)	4	Best
Sexual & reproductive health (2016 -17)	7	Average
Air Quality (2017) - INTERIM MEASURE	12	Worst

Source: Public Health England <https://healthierlives.phe.org.uk/topic/public-health-dashboard/area-details#are/E08000019/par/nn-1-E08000019/sim/nn-1-E08000019>

Last year's DPH report recommendations

Each year the Director of Public Health Report makes a set of recommendations for improving health and tackling health inequalities within the local population.

Here I summarise the progress made on the recommendations I made in last year's report.

Recommendation	Progress
<p>The Council and the CCG should request Public Health England to co-ordinate further research on identifying and describing the long term return on investment and effectiveness of primary and secondary prevention models for tackling Adverse Childhood Experiences (ACEs).</p>	<p>The research assembled to date indicates that the most cost effective approach to take strategically would be one which seeks to reduce the number of adversities experienced by people in Sheffield and build resilience to prevent the negative impacts in children before they experience ACEs and to mitigate the negative impacts (as soon as possible) for children and adults who have already experienced ACEs.</p>
<p>The Council and the CCG should review the mental health strategy and evaluate the City's approach to mental health and wellbeing against the current evidence base for high impact/high value interventions, including the economic case for investment on good mental health.</p>	<p>The mental health strategy has been reviewed against the latest economic and effectiveness evidence base and is currently in draft form awaiting consultation with stakeholders and communities. It is likely to be published later in the year.</p>
<p>The Council and the CCG should commission more in-depth epidemiological analysis of changes in multi morbidity and enhance their approach to healthy ageing, including care of people who have multiple illnesses.</p>	<p>A range of analyses and strategic developments are being taken forward to support greater understanding of and response to multi morbidity in Sheffield including commissioning more detailed prevalence estimates from Public Health England and further analysis undertaken for the Accountable Care Partnership.</p> <p>In relation to developing our approach to healthy ageing and care of people with multiple illnesses, we are currently re-shaping our approach to a City for all Ages; Social Prescribing; and Person Centred City, in addition to developing a prevention framework for the Council and renewing the Health and Wellbeing Strategy using a life course approach.</p>

Further information

For more information on health and wellbeing outcomes in Sheffield you can access various data, maps and graphs, in-depth health needs assessments and other resources from our online JSNA resource, although please be aware this is still a work in progress and there will be many more topics to be added over the rest of the year:
